

Company Staffing Overview :

This document outlines the current staffing structure and recent hiring initiatives. We are committed to fostering a dynamic and skilled workforce to achieve our strategic objectives.

Our core development team consists of highly capable individuals. We have several “Software Engineers” dedicated to building robust applications, alongside experienced “Project Managers” who oversee the successful delivery of our projects. A key component of our technical leadership includes our “Senior Developers”, providing mentorship and deep technical expertise.

In our quality assurance department, we currently employ a “QA Tester” to ensure the reliability and performance of our software. We are actively seeking to expand our team, including new hires for a “Data Scientist” role to enhance our analytical capabilities.

Below is a summary of our department staffing, reflecting roles and their counts. Please note that these numbers are subject to change based on ongoing recruitment.

ROLE	COUNT
Software Engineer	5
Product Manager	9
Senior Developer	3
Buisness Analyst	2
Marketing Lead	2

Furthermore, our operational efficiency is supported by a dedicated “Operations Specialist”. We also have a newly created position for an “Agile Coach” to help streamline our development methodologies.

Recent recruitment efforts have focused on bolstering our product management arm, with a keen interest in a “Product Owner” to drive feature development.

This overview should provide a clear picture of the roles within our organization. We aim for accurate and consistent data across all our internal systems.
